

# SLIMEWATCH AI

## BEGINNER'S TACTICAL GUIDE

### WELCOME TO THE FLEET

---

- SlimeWatch AI turns your phone into a synchronized sensor for community safety.
- Everything you record is shared instantly with other users in your immediate area.
- Follow this guide to master the basic tactical operations.

### 1. CAPTURE: MANUAL REPORTING

---

- Tap 'PROCEED' on the initial screen to engage your camera's biometric sensors.
- Point your phone at a subject. Blue brackets will automatically track their face.
- Tap the center button to capture a frame. You will feel a pulse when successful.
- Talk to the app: Describe the subject and the situation. Don't worry about typing.
- The AI will automatically transcribe and summarize your notes into a professional log.

### 2. LIVE SCAN: AUTOMATED TRACKING

---

- Switch to the 'Radar' tab to monitor your area hands-free.
- The AI scans for anyone already on the community watch list.
- If a match is found, the HUD turns GREEN and your device will vibrate.
- A popup will appear with the match details and the location will be shared with the fleet.

### 3. THE TACTICAL MAP

---

- View the live dashboard of your sector. Pins are color-coded for quick identification:
- CYAN: Reported Incidents | MAGENTA: Missing Persons
- GREEN: Verified Sightings | RED: Active Emergency SOS
- Swipe the cards at the bottom to glide between different events on the map.
- Long-press any card to view that individual's entire sighting history.

## 4. EMERGENCY SOS (PANIC BUTTON)

---

- The round ALARM icon is located at the top-right of every screen.
- Double-tap the icon to trigger a 10-second emergency countdown.
- Once active, your location is broadcast to everyone within 1 mile.
- A high-intensity siren will sound, and SMS alerts are sent to your chosen contacts.
- To cancel, long-press the fingerprint icon on the red emergency overlay.

## 5. PROLIFIC TARGETS

---

- Open the side menu (top-left) and select 'Sector Intelligence'.
- Here you can see individuals who have been captured or sighted multiple times.
- The AI groups these people by their biometrics, even if they change clothes.
- Tap a target to see their full timeline and where they were last seen.

## 6. QUICK TIPS FOR FIELD SUCCESS

---

- Stay Cool: The app handles the technical work. Just point and speak clearly.
- Battery Save: If you put your phone in your pocket, the sensors hibernate automatically.
- Distance: For the best biometric lock, keep the subject within 10 meters.
- Fleet Power: If you have an extra Android device, set it as a 'Relay Node' in settings.
